**UKS**  
SINCE 2005 FROM CHINA

We firmly believe that the development of industrial technology is endless, and there is no end to quality and customer service.

To achieve the ideal and pursuit of perfection, UKS never stops.

As long as the world is making progress, you can see that UKS is diligent and dedicated.

DESIGN IN BEIJING THE INTERNET Nr.302014034200

## Convenient ordering

### The most direct way of supply

Without intermediate links is the direct marketing terminal sales model

### Same day delivery

We have some items with quick shipping, scientific guarantee supply efficiency

### Fast delivery

The fastest next-day delivery, and efficient working mode, so that you have unlimited business opportunities

## Quality & Technology

### Excellent raw materials create noble quality

Good quality rubber refining, highly intelligent equipment CNC production procedures, and quality requirements

### Technology derived from superb theoretical practice

Global customer trust and tireless quality requirements

### Confidence in service

For quality, we dare to promise, dare to face, dare to climb the technical peak in the service

## WMS(Warehouse Management System)

### Stylized assisted management

The typical representative of information management, the pioneer of systematic management practice

### Modern service, fashion management

Make industry into fashion, regard parts as handicrafts, to win your rare trust

### Sincere team facing the same goal

The existence of the same reasonable goal makes team members invincible

Feelings of the information age Feast

So that efficient management of customer orders used to guide

Fast processing orders

# END COVERS

Cross section

Front view

## Product Overview

Rubber End Covers is also called end cap or lid oil seal, mainly used in construction machinery, injection molding machinery, industrial machinery, rubber vulcanization machinery, Pressure machinery, construction machinery, and other hydraulic equipment oil seal, bearing cavity hole end, In particular, gearboxes and other components are expensive. As an alternative to end flanges or end caps It not only ensures the leakage of oil products in the chassis, but also prevents dust and dirt from invading the mechanical transmission parts, and also strengthens the tidiness and beauty of the mechanical box.

## Product material

Steel +NBR Rubber:

1, NBR rubber has good oil resistance, wear resistance, and aging resistance (specific data

See our company UKS Rotary Oil Seal catalogue). The company uses good quality rubber, which lays a good foundation for the excellent quality of products

2, the company's products are made of rubber all-wrapped skeleton, which avoids the problem of rust in bad oil or liquid media

## Product advantage

- 1, prevent oil leakage in the mechanical cavity;
- 2, to prevent the dust outside the machinery, iron filings, and other residues into the machinery;
- 3, to prevent abnormal metal splashing inside the machine to hurt people;
- Maintain the beauty of the mechanical box;
- 5, to prevent the axial movement of the bearing, played a certain positioning role.

Recommended application

Reducer, gear box, rolling mill, construction machinery, etc

SINCE 2005 FROM CHINA

*Janne viscose industrial 2005*

# Leading the way in Technology & Quality

JANNE VICESE Industrial Co., Ltd., was invested in the mainland of China in 2008, with industrial area of 12,300 square meters, and construction area of 6,200 factories and office buildings.

The environment of the area with green area more than 48 and attractive landscapes is pretty elegant, and vigorous.

JANNE VICESE is an enterprise by production and trade of professional rubber seals, automobile and motorcycle parts and accessories hydraulic transmission parts.

Among its production, the brands of UKS seal series are well-known.

They are widely used in mining, machinery manufacturing and other industries.

JANNE VICESE provides accessories many years to major companies for several years,

and, therefore,

has been greatly trusted by numerous mechanical equipment manufacturing and automobile manufacturing enterprises.

## Raw materials are the quality basis of sealing elements

Raw materials are the quality basis of sealing elements:

How to choose the raw material, is key for the service life of the sealing elements. This reflects the value orientation of an enterprise, different market settings. With different demands for quality, UKS has been pursuing high quality and high standard, strictly checking, globally broadening unlimited vision, seeking noble quality as the primary purpose in the selection of raw materials. Those make the high standard level of UKS brand.

Material technology development and unlimited possibilities application expansion:

How to choose the raw material, is key for the service life of the sealing elements. Possessing a considerable level of R & D technology refine mixing is necessary. Rubber products are a polymer chemical technology application, the polymerization of molecules determines the function and endurance of the finished product. With the thoughts of selecting high quality raw materials, the UKS technology research group bases on the molecular structure and practicability can be targeted, and continues to innovate and make progress in pursuit of product perfection to meet different customer needs, different use environments, different practical application of different industries. The group has achieved a lot and has gained a good reputation from customers.

Strict management of the production procedure is quality assurance:

For the processing technique of rubber products, different people have different views. At different stages of technological development, different views exist. However, UKS processing management system, with rigorous scientific attitude, pursuits simple management mode in the substantive stage of production, and has been closely analyzed unforeseen events at each production stage. UKS buys the most suitable high-tech equipment from production units through cooperative production customization and production program, monitors every second production change on sulfur, thus has reached the highest standard of the industry.

We believe  
the industry will be developed forever  
product quality and customer service are same of  
no Terminal point  
To reach such this target of perfect  
UKS never stoped to hard work  
Only the world be developed  
you will see the appearance about the UKS  
their are diligent and work with concentration.

We prove that dealer is authorized by UKS to sale the  
series industrial sealing products, and the products we  
sell are all the certified and quality produces
